

Steps to install and run robot simulations on ARGoS (Ubuntu)

Step number	Steps	Website to access	Command on Terminal
1	Install necessary requirements	https://github.com/ilpincity/argos3	<pre>\$ sudo apt-get install cmake libfreeimage-dev libfreeimageplus-dev \ qt5-default freeglut3-dev libxi-dev libxmu-dev liblua5.3-dev \ lua5.3 doxygen graphviz libgraphviz-dev asciidoc</pre>
2	Download the ARGoS3 package for your version of Ubuntu	https://www.argos-sim.info/core.php	
3	Run command to install the package	https://www.argos-sim.info/core.php	<pre>\$ sudo apt install ./argos3_simulator-3.0.0-x86_64-beta59.deb</pre>
4	Download and unzip the project	https://github.com/lukey11/Foraging-Swarm-Robot-ARGoS	
5	Run the compilation script in the CPFA directory		<pre>\$./build.sh</pre>
6	Fix the error "No package 'argos3_simulator' found" by editing CMakeLists.txt		<pre>Replace "find_package(PkgConfig) pkg_check_modules(ARGOS REQUIRED argos3_simulator) set(CMAKE_MODULE_PATH \${CMAKE_MODULE_PATH} \${ARGOS_PREFIX}/share/argos3/cmake) with "find_package(ARGoS REQUIRED) include_directories(\${CMAKE_SOURCE_DIR} \${ARGOS_INCLUDE_DIRS}) link_directories(\${ARGOS_LIBRARY_DIRS}) link_libraries(\${ARGOS_LDFLAGS})" Replace "find_package(GSL REQUIRED)" with "# find_package(GSL REQUIRED)" Replace "include (ARGoSCheckQTOpenGL)"</pre>

			<code>with</code> <code>"# include (ARGoSCheckQTOpenGL) "</code>
7	If successfully compiled, run the command		<code>\$ argos3 -c experiments/Random_CPFA_r104_tag1024_20by20.xml</code>
